

The Future of Community Health Improvement

**Working with SHIP, our LHIC, and a
SIM-CIMH model**

**Jean-Marie Donahoo
Co-Chair , CHAC**

SHIP and LHIC

- **SHIP** – State Health Improvement Process
 - Localizes health action at the community level to improve population health and reduce disparities
 - Uses 39 health outcome measures to align action in 6 focus areas to increase life expectancy:

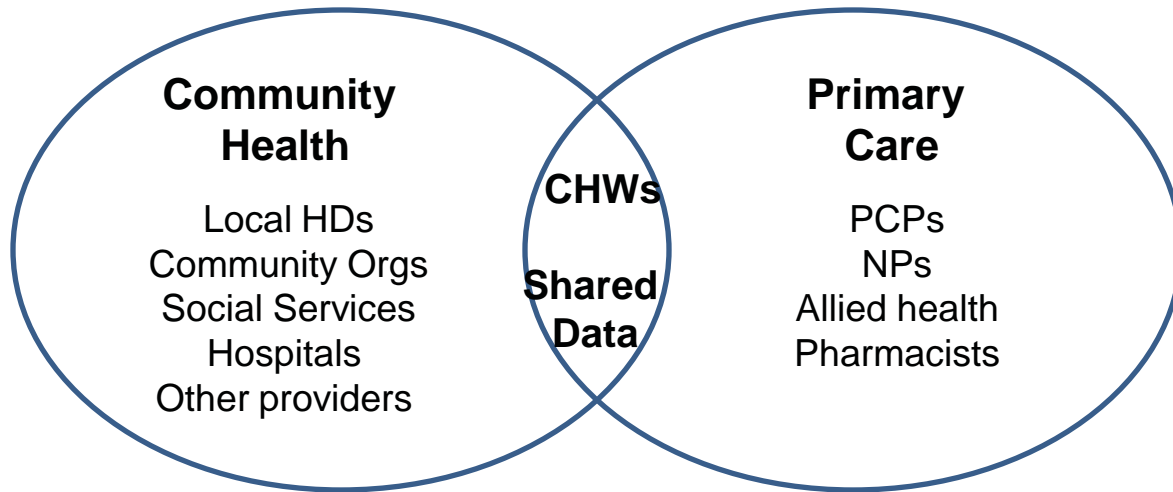

Healthy babies	Infectious disease reduction
Healthy social environments	Prevent and control chronic disease
Safe physical environments	Improve health care access

- **LHIC** – Local Health Improvement Coalition
 - CHAC
 - Governing coalition for the Local Health Improvement Plan (LHIP) (5 priorities)

SIM and CIMH

- **State Innovation Model (SIM)**
 - Released by CMS
 - Purpose: to develop, implement, and test new health care payment and service delivery models at the state level
- Maryland received the “Model Design” award through SIM to develop a **Community Integrated Medical Home (CIMH)**

Community Integrated Medical Home

CIMH seeks to improve health outcomes by targeting areas of high need and deploying CHWs/CCWs/CMs to help monitor, educate, and facilitate self-management of health conditions

CIMH will help to further integrate the developments/achievements of our LHIP into reducing the burden of health issues in our county

The Role of LHICs

- **Right now:**
 - Convening/facilitating/coordinating (CHAC)
 - Planning and priority setting (LHIP)
 - Performance monitoring (red/yellow/green)
- **In the near future** our LHIC can expect:
 - CIMH integration into our LHIP
 - Emphasis on increased provider collaboration
 - LHIP support of CHWs/CCWs/CMs in our area
